

# Palladio USB Data Cable

## DESCRIPTION

*It's easy to connect to the Internet with your mobile phone!*

*The new range of modem adapters for the latest generation of GSM mobile phones.*

Palladio USB Data Cable is the most practical solution to connect the PC or MAC to your mobile phone. Just connect it to the USB port of your PC or MAC and set it up.

No more problems with the management of the IrDa port with Windows® 2000, XP or with your iBook.

Palladio USB Data Cable has been expressly projected to better use the new mobile phones supporting GPRS (General Packet Radio Service). It joins the convenience and the advantage of a cable if compared with the IrDA technology and to the expensive Bluetooth technology.

Then you will be able to connect to the Internet in the modes supported by your mobile phone (Data 9600, GPRS, HSCSD).

Palladio USB Data Cable supports the Utility programs (i.e. to synchronize your PC, etc.) bundled with the mobile phones.

Complete with the drivers for Windows® XP, 98, 2000, ME, Mac OS® 9 and Mac OS® X.

Furthermore, into the package, you will find a Pack CD bonus containing a useful program to manage the phonebook of your mobile phone and send/receive SMS. (for Windows® only)

- External GSM modem adapter
- USB interface
- Powered by the USB port
- Send/receive data, e-mail at 9600 bps over the GSM network
- Radio Link Protocol
- V.32 standard for analog connections
