

Usb Serial Converter

DESCRIPTION

Use your Serial devices over USB port.

Your brand new computer no longer provides serial communication ports? Doesn't matter!

USB Serial Converter transforms one of the USB ports on the PC or Macintosh® into a standard 9 pin serial port up to 128.000 bps, where you can connect modems, handheld cradles and other serial devices.

In combination with Digicom Palladio Data Cable (8Exxxx) it becomes the best solution for accessing the Internet, sending and receiving e-mail through your GSM handy phone.

Installing USB Serial Converter takes only few minutes.

Just connect it to your computer's USB port or hub, insert the driver CD-ROM and follow the given instructions.

It is supplied with the drivers for Windows® 2000/XP/ME/98 and Macintosh®.

Always on line with your mobile phone and laptop as in your office!

Code: 8E4097
