GPRS Card S

Code: 8D0120

DESCRIPTION

Just connect to the Internet whenever you want with Digicom's GPSR Card S! You'll be always on-line with the GPRS connection.

GPRS Card S is Tri-Band (900/1800/1900MHz) PC Card that allows the connection in any country covered by the GPRS network.
You will be able to read the e-mails or send a fax also when you are far from your office; your PC turns into a real mobile office.

GPRS Card S is supplied with the Mobile Phone Tools software that makes all the operations easier and faster.

The configuration of your GPRS profile will be as easy as sending a fax or an SMS. The software will guide you in the settings avoiding any mistake in the configuration.
Furthermore thanks to the telephone emulation the GPRS Card S can be used as a mobile phone.
The Internet connection will be easier.
With the performances of Class 10 you will be able to "send and receive" at speeds comparable to those of analog modems.
